Art Unit: 2621

***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claim 1, drawn to a subject matter of personnel identification, classified in Class 382, subclass 115.

Group II: Claims 20-51, drawn to a subject matter of intelligence for controlling identity authorization comprising a stylus as an image sensing device in communication with a processor, classified in Class/subclass 340/5.83 and/or Class/subclass 382/314.

2. The inventions of Groups I and II are distinct from the each other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed, Invention II, does not require the particulars of the subcombination as claimed in Invention I for patentability. The subcombination has separate utility such as “approving the transaction request whenever the match processor determines that based at least partially upon fingerprint data of the first sensed fingerprint image and the first reference fingerprint image, identity is confirmed, confirmation determination being independent of any of image generated upon the flat surface”.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and

Art Unit: 2621

required the different field of search for each of these inventions, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
